DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Specification

1. The specification is objected to because it includes the section on the claim of foreign priority on the first page. It should be removed.

The specification is objected to because it includes an unnecessary line in the abstract. A line reading "Figure for publication: Figure 2a" should be removed from the abstract

The specification is objected to because the title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

2. Claims 1-9 are objected to because of the following informalities:

Re claim 1, for the purpose of clarity,

- “,” should be replaced with “;” wherever appropriate and insert “:” at the end of line numbers 2 and 16
- should add “; and” at the end of line number 7 and “while” in line number 25 should be replaced with “and”

Re claims 1-5, for the purpose of clarity, the indication to the figure elements should be removed.

Re claim 2, for the purpose of clarity, add “:” at the end of lines 3 and 13 and add “and” at the end of line number 15.

Re claims 2-9, for the purpose of clarity, the phrase “the step(s) of :” should be added after the phrase “characterized in”.

Allowable Subject Matter

3. Claims 1-9 are allowed.

The following is an examiner's statement for reasons for allowance.

4. Claims 1-9 are allowable over the prior art of record since the cited references taken individually or in combination fails to particularly disclose a method of allocating and controlling downlink power in CDMA system by comparing accumulated power requests of mobile stations with the maximum system power of the base station in deciding whether to accept or reject power requests and utilizing admission and congestion control measures, respectively. It is noted that the closest prior art, Cordier et al. (US Patent 6765897) shows a method of adjusting the downlink power level of the base station by using Transmit Power Control (TPC) signal, but fails to disclose utilizing admission control measures in accepting power requests and congestion control measures in rejecting power requests as required by the claimed invention.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- US Patent (6226277) to Chuah discloses a method for admitting new connections based on usage priorities
 - US Patent (6708041) to Butovitsch et al. discloses a base station power control in a CDMA system
 - US Patent (6212174) to Lomp et al. discloses capacity management for CDMA system
 - US Patent (6606341) to Kanterakis et al. discloses common packet channel with firm handoff
 - US Patent (6639934) to Engstrom et al. discloses power control in a CDMA system
